### 19–28 Juni 2023 | June 19–28, 2023

Jasa Tirta I kembali laksanakan flushing atau penggelontoran sedimen yang ada di Waduk Sengguruh. Kegiatan ini dilandasi beberapa penyebab yaitu sedimen yang ada di Waduk Sengguruh telah mendekati intake PLTA sehingga perlu dilakukan penanganan untuk mencegah sedimen agar tidak masuk ke turbin, dan adanya sampah di area trashrack PLTA Sengguruh yang juga berpotensi mengganggu operasional PLTA. Selain itu, adanya 3 unit sand flushing yang tidak dapat beroperasi membutuhkan inspeksi untuk tindakan perbaikannya.

Jasa Tirta I carried out flushing or ejecting sediment in the Sengguruh Reservoir. This activity is based on several causes, namely the sediment in the Sengguruh Reservoir has approached the hydropower intake so that it needs to be handled to prevent sediment from entering the turbine, and the presence of garbage in the Sengguruh hydropower trash rack area, which also has the potential to disrupt hydropower operations. In addition, 3 inoperable sand flushing units required inspection for corrective action.
